Nomenclatural novelties : Alona Yu. Biketova, Solomon P. Wasser, Giampaolo Simonini, Matteo Gelardi

Neoboletus flavosanguineus (Lavorato & Simonini) Biketova, Wasser, Simonini & Gelardi, comb.nov.
IF 558831

Basionym: *Boletus flavosanguineus* Lavorato & Simonini, Riv. Micol. 40(1): 37 (1997)

Notes: The nomenclatural novelty proposed herein validates the combination “*Neoboletus flavosanguineus* (Lavorato & Simonini) Biketova and Wasser comb.nov. nom.prov.”, proposed by: Biketova A.Yu. (2016: 49). Species diversity, distribution, and phylogeny of Boletales s. str. of Israel, with special attention to taxonomy of the former *Boletus* sect. *Luridi* and the genus *Hortiboletus*. PhD thesis. University of Haifa: Haifa, Israel. The inclusion of *B. flavosanguineus* in the boletoid genus *Neoboletus* (Boletaceae, Boletales) is justified by an inclusive morphological and molecular study of more than twenty different collections originated from southern Italy (Calabria and Sicily), including the holotype material and additional topotypic samples. Sequences based on five loci (ITS, LSU, TEF1, RPB1 and RPB2) have been generated from the aforementioned material and a multilocus phylogenetic tree focused on *Neoboletus* is currently in preparation for an upcoming publication.
